

# Mechanical components for port equipment

Friction discs

King pin including  
D-glide bearings

D-glide FC  
spreader wear pads

Cable sheaves  
with bearings

Rod ends and  
spherical bearings

Brake pads, discs  
and calipers

Tailor made  
bearings

Brake drums  
and shoes

Steering and  
traction components

***Wearing and bearing parts***

***Brake components***

***Spare parts***

### **DRIE-D: Mechanical components for port equipment**

Reduction of maintenance and down time always was and always will be a major goal for any port operation. Components break down because of design flaws, insufficient lubrication, less than optimum material choice or simply because the conditions and usage are more severe than foreseen. DRIE-D cannot change operating conditions but everything else falls within our area of expertise.

Our D-glide bushings, wear plates, guides and slides are a maintenance free replacement for bronze equivalent parts; D-glide is more wear resistant and friendlier for the counter face than bronze, is much better in dealing with shock loads and vibrations and can in most cases be used without any lubrication. DRIE-D has the engineering knowledge and capacity to improve designs and provide all technical support necessary and a long track record and extensive portfolio of successful applications.

With our wide range of friction components we are often able to increase life times of the brake pads and shoes, friction discs and clutches found on straddle carriers, automatic guided vehicles, cranes, reach stackers and so on.

The delivery program includes sheaves - metal and plastic -, wear pads, roller bearings, rod ends, precision parts, refurbishment and virtually any other mechanical component found on port terminals.

*Interested: please contact DRIE-D for further information or our catalogue.*
